PRE-DOCTORAL PAPERS

| | |
|---|------|
| Heterogeneous Labour Market Concentration and Minimum Wage Policy [Draft] | 2023 |
| This paper empirically tests whether minimum wages may have positive employment effects when diverging from a perfect competition framework. I use administrative data from 1986 to 2013 to segment Portugal into several local labour markets and construct Herfindahl–Hirschman Indices to measure concentration levels in each market. I find that increased minimum wage exposure has differential employment effects depending on labour market concentration - estimates indicate employment responds negatively in highly competitive markets and positively in highly concentrated ones. These results are robust to the usage of instrumental variables and to different definitions of local labour markets, although the persistence of these effects varies across specifications. Labour markets are highly heterogeneous in their concentration level, which can help reconcile the conflicting results in the minimum wage literature and provide new policy insights. | |

TEACHING EXPERIENCE

EC1A3 Microeconomics I (Undergraduate)

Graduate Teaching Assistant

Lecturer: Ronny Razin

LSE

2025

OTHER TRAINING

Macro Numerical Summer School – The Essentials*London School of Economics*

London, UK

2023

PRESENTATIONS
